SUMMARY

Backend engineer, 10+ years: PHP/Symfony and Python/Django. Since 2023 — microservices for one of the largest online retailers in Belarus: I design around DDD and own a service from its domain model to production on Kubernetes.

EXPERIENCE

Senior Software Engineer · Triovist LLC (21vek.by) — 2023 – Present · Minsk

One of the largest online retailers in Belarus — electronics, appliances and a retail marketplace.

- Build new microservices and maintain existing ones, modelling each around its business domain with Domain-Driven Design so services stay changeable as catalogue and order rules evolve.
- Migrated the legacy CakePHP monolith to Next.js with the team, moving functionality over piece by piece without taking the site down.
- Work mostly in the cart and delivery domain: how a cart is assembled and priced down to promo-code discounts, and which delivery methods and time slots a customer is offered at checkout.
- Core stack: Symfony/PHP on MySQL and Redis, Kafka for inter-service messaging, shipped on Docker and Kubernetes.
- Built 21vek Post, a new parcel-shipping service, with the team: parcel creation, shipping-cost calculation for add-on services, and a two-way exchange with 1C via transactional outbox, RabbitMQ and Kafka.
- Use AI tooling day to day: Claude Code for code generation, review and getting up to speed in unfamiliar parts of the system — extended with skills and plugins I write myself, and with internal and external tools wired in over MCP.
- Write Python tooling for analytics and data processing — pandas pipelines for reporting and ad-hoc analysis, scheduled and orchestrated with Airflow.

Stack: PHP · Python · pandas · Airflow · Symfony · CakePHP · MySQL · PostgreSQL · Redis · Kafka · RabbitMQ · Kubernetes · Docker · Next.js · DDD

Senior Backend Developer · hoster.by — 2021 – 2023 · Minsk

Belarusian hosting, domain and cloud-services provider.

- Extended the customer account area, where clients manage their hosting, domains and other services.
- Integrated third-party APIs with internal services, keeping provider changes isolated from the products that depended on them.
- Worked on a PHP/MySQL stack with ClickHouse for analytical queries, Redis caching, REST APIs and a Vue.js frontend, containerised with Docker.

Stack: PHP · MySQL · ClickHouse · Redis · REST API · Vue.js · Docker

Senior Backend Developer · EffectiveSoft — 2020 – 2021 · Minsk

Custom software development company.

- Estimated incoming work, built new functionality and evolved existing client projects in PHP (Symfony, Laravel) and Python.
- Rebuilt the cart of a US phone-number purchasing service from scratch: multiple numbers per order, a cart countdown timer and caching.
- Introduced Docker and CI/CD, replacing manual builds and deployments.
- Planned and distributed tasks for junior engineers on the team.

Stack: PHP · Symfony · Laravel · Python · MySQL · WordPress · Docker · CI/CD

Software Engineer · Itransition 2017 – 2020 · Minsk

International software engineering and IT-consulting firm.

- Built projects from scratch and extended existing ones for enterprise clients across PHP (Symfony), Python and MySQL, delivered through a Jenkins CI/CD pipeline.
- Also maintained WordPress/WooCommerce online stores.

Stack: PHP · Symfony · Python · MySQL · WooCommerce · JavaScript · Jenkins · CI/CD

PHP Developer · Zaochnik.com 2015 – 2017 · Minsk

Online education marketplace.

- Supported the company's products and resolved production failures promptly.
- Connected external services over APIs; worked across PHP (Laminas), MySQL and Python/Django.

Stack: PHP · Laminas · MySQL · Python · Django · WordPress

Frontend Developer · Freelance 2012 – 2015 · Minsk

Independent contracting for web studios and direct clients.

- Built HTML/CSS templates from PSD designs of varying complexity, from landing pages to multi-page company sites.

Stack: HTML · CSS · JavaScript · Bootstrap

SELECTED PROJECTS

find-apartment github.com/LeikoDmitry/find-apartment

Rental-listing scanner for Kufar and Realt.by that de-duplicates against SQLite and pushes only unseen listings to Telegram with photos and coordinates; price and room filters are changed live by chat command.

- Runs on a 10-minute schedule in Docker; a single-poller guard turns Telegram 409 conflicts into a clear startup refusal instead of silent message loss.
- Typed and linted end to end — mypy, Ruff, and a GitHub Actions test and image-publish pipeline on every push.

Stack: Python 3.12 · SQLite · Telegram Bot API · Docker · GitHub Actions · mypy · Ruff

SKILLS

Languages	PHP 8 · Python 3 · JavaScript · SQL
Frameworks	Symfony · Laravel · CakePHP · Laminas · Django
Frontend	Vue.js · Next.js · HTML · CSS · Bootstrap
Architecture	Domain-Driven Design · SOLID · Microservices · REST APIs
Data	MySQL · PostgreSQL · ClickHouse · Redis · SQLite · pandas
Infrastructure	Docker · Kubernetes · Kafka · RabbitMQ · Airflow · Linux · Git · GitHub Actions · Jenkins
AI tooling	Claude Code · Skills & plugins · MCP integrations · LLM-assisted code review

CERTIFICATIONS

2018	Zend Certified Engineer — Rogue Wave Software
2014	PHP Developer — High-Tech Park, Minsk

EDUCATION

Minsk State Professional Lyceum of Mechanical Engineering 2001 – 2004

Bachelor's degree, Mechanical engineering

LANGUAGES

Belarusian	Native
Russian	Native
English	B2 — Upper-intermediate
