SUMMARY

Backend engineer, 10+ years: PHP/Symfony and Python/Django. Building microservices for one of the largest online retailers in Belarus: I apply domain-driven design (DDD) and own a service from its domain model to production on Kubernetes.

EXPERIENCE

Senior Software Engineer · Triovist LLC (21vek.by) — 2023 – Present · Minsk

One of the largest online retailers in Belarus — electronics, appliances and a retail marketplace.

- Build and maintain microservices end to end — domain model, service boundaries, code review, production support — each modelled around its business domain so it stays changeable as catalogue and order rules evolve.
- Work in the purchase stream — two teams of ten engineers — mostly in the cart and delivery domain: how a cart is assembled and priced down to promo-code discounts, and which delivery methods and time slots a customer is offered at checkout.
- Instrumented the purchase flow with product metrics: tracking events from cart and checkout through order confirmation, so funnel conversion and drop-off points are visible to the business.
- Built 21vek Post, a new parcel-shipping service, with the team: parcel creation, shipping-cost calculation for add-on services, and a two-way exchange with 1C through a transactional outbox and message brokers.
- With the team, moved the site from the CakePHP monolith to Next.js over six months of staged releases — home, listings, product card, pickup, order history — with HAProxy routing between old and new code.
- Built the auto-parts finder backend with the team: search by VIN or car model, a catalogue of assemblies with parts diagrams, originals and analogues; part cards are assembled from events across seven topics.
- Use Claude Code day to day for code generation, review and getting into unfamiliar code, extended with my own skills and plugins and with tools wired in over MCP.
- Write analytics and data-processing tooling: reporting pipelines and ad-hoc analysis, run on a schedule.

Stack: PHP · Python · pandas · Airflow · Symfony · CakePHP · MySQL · PostgreSQL · MongoDB · Redis · Kafka · RabbitMQ · Kubernetes · Docker · Next.js · DDD

Senior Backend Developer · hoster.by — 2021 – 2023 · Minsk

Belarusian hosting, domain and cloud-services provider.

- Extended the customer account area and the internal CRM: management of services, hosting and domains, plus website monitoring.
- Integrated third-party APIs with internal services, keeping provider changes isolated from the products that depended on them.
- Set up, tuned and integrated Sphinx full-text search into the services.

Stack: PHP · MySQL · ClickHouse · Sphinx · Redis · REST API · Vue.js · Docker

Senior Backend Developer · EffectiveSoft — 2020 – 2021 · Minsk

Custom software development company.

- Estimated incoming work, built and evolved client projects, and planned tasks for junior engineers.
- Rebuilt the cart of a US phone-number purchasing service from scratch: multiple numbers per order, a cart countdown timer and caching.
- Introduced Docker and CI/CD, replacing manual builds and deployments.

Stack: PHP · Symfony · Laravel · Python · MySQL · WordPress · Docker · CI/CD

Software Engineer · Itransition 2017 – 2020 · Minsk

International software engineering and IT-consulting firm.

- Maintained and developed a customs duty and tax calculation system.
- Built projects from scratch and extended existing ones for enterprise clients, with builds and deployments running through Jenkins.
- Supported WordPress/WooCommerce online stores.

Stack: PHP · Symfony · Python · MySQL · WooCommerce · JavaScript · Jenkins · CI/CD

PHP Developer · Zaochnik.com 2015 – 2017 · Minsk

Online education marketplace.

- Supported the company's products and resolved production failures promptly.
- Connected external services over APIs.

Stack: PHP · Laminas · MySQL · Python · Django · WordPress

Frontend Developer · Freelance 2012 – 2015 · Minsk

Independent contracting for web studios and direct clients.

- Turned PSD designs of varying complexity into page templates, from landing pages to multi-page company sites.

Stack: HTML · CSS · JavaScript · Bootstrap

SELECTED PROJECTS

find-apartment github.com/LeikoDmitry/find-apartment

Rental-listing scanner for Kufar and Realt.by that de-duplicates against SQLite and pushes only unseen listings to Telegram with photos and coordinates; price and room filters are changed live by chat command.

- Runs every 10 minutes; a second copy of the bot will not start while the first is running, so chat commands are not lost to Telegram 409 conflicts.
- Typed and linted end to end, with tests and image publishing in CI on every push.

Stack: Python 3.12 · SQLite · Telegram Bot API · Docker · GitHub Actions · mypy · Ruff

SKILLS

Languages	PHP 8 · Python 3 · JavaScript · SQL
Frameworks	Symfony · Laravel · CakePHP · Laminas · Django
Frontend	Vue.js · Next.js · HTML · CSS · Bootstrap
Architecture	Domain-Driven Design · SOLID · Microservices · REST APIs
Data	MySQL · PostgreSQL · MongoDB · ClickHouse · Sphinx · Redis · SQLite · pandas
Infrastructure	Docker · Kubernetes · Kafka · RabbitMQ · Airflow · Linux · Git · GitHub Actions · Jenkins
AI tooling	Claude Code · Skills & plugins · MCP integrations · LLM-assisted code review

CERTIFICATIONS

2018	Zend Certified Engineer — Rogue Wave Software
2014	PHP Developer — High-Tech Park, Minsk

EDUCATION

Minsk State Professional Lyceum of Mechanical Engineering 2001 – 2004

Bachelor's degree, Mechanical engineering

LANGUAGES

Belarusian	Native
Russian	Native
English	B2 — Upper-intermediate
